

Adult / Teacher Answer Key

Covers all 20 worksheets. For adult/teacher use — not intended to be shown to the child before they complete the worksheet. English-only resource; not connected to the website's translation system.

1. What Is Money? (Explorer)

Template: Sort It Out | Age band: Explorer | Answer type: Objective

- MONEY: a coin, a banknote, a card
- NOT MONEY: a leaf, a sticker, a rock, a shell, a paperclip

2. Where Does Money Come From? (Builder)

Template: Match It Up | Age band: Builder | Answer type: Objective

- Babysitting → Earned by doing a job
- Chore → Earned by doing a chore
- Selling a toy → Earned by selling something
- Wishing hard → Not a real way to earn money
- Bottom question is open-ended — accept any real, honest example.

3. What Does Saving Mean? (Explorer)

Template: Save & Track | Age band: Explorer | Answer type: Tracking tool (no fixed answer)

- This is a real multi-day habit tracker, not a one-sitting quiz — there is no 'correct' fill-in.
- Success = the child engaging with the tracker over several real days, matching the lesson's own 5-day in-app challenge.

Adult note: If your child spends what they've saved this week, that's a normal part of learning, not a setback — avoid framing it as failure.

4. Saving for Something Bigger (Builder)

Template: Save & Track | Age band: Builder | Answer type: Personal goal tool (no fixed answer)

- Any real, personally chosen goal and cost is valid.
- Check only that the weekly 'saved so far' and 'left to go' numbers are arithmetically consistent with each other, not against any specific target.

Adult note: Resist topping up the last bit of a goal for them — reaching it under their own steam matters more than the total.

5. Saving vs. Spending: The Real Trade-off (Strategist) — CORRECTED VERSION

Template: Work It Out | Age band: Strategist | Answer type: Objective + short reasoning

- Q1: Person B — interest has more time to build up the longer money stays saved.
- Q2: "Because the extra amount has more time to build up" (directly from the lesson's own quiz explanation).
- Reflection: accept any answer that connects longer saving time with more accumulated interest.

Adult note: Deliberately number-free — the lesson itself avoids stating a real interest rate, since real rates vary by country and provider. Do not introduce a specific real rate when discussing this with your child.

6. Understanding Exchange Rates (Strategist) — CORRECTED VERSION

Template: Work It Out | Age band: Strategist | Answer type: Objective calculation

- 5 Zetis → 10 Blips
- 10 Zetis → 20 Blips
- 20 Zetis → 40 Blips
- At the new rate (1 Zeti = 1.5 Blips): 10 Zetis → 15 Blips
- Reflection: because exchange rates change over time — the same amount converts differently depending on when you check (matches the lesson's own quiz explanation).

Adult note: Zeti/Blips are an intentionally fictional currency pair — the actual lesson gives no real-world rate, so none is used here. Do not substitute a real currency pair when discussing this.

7. Some Promises Are Too Good (Explorer)

Template: Spot the Scam | Age band: Explorer | Answer type: Objective

- Message 1 (free prize, click now): TRICK
- Message 2 (Grandma, dinner at 6): SAFE
- Message 3 (claim money you never asked for): TRICK

8. Spotting a Scam (Builder)

Template: Spot the Scam | Age band: Builder | Answer type: Objective + short reasoning

- Message 1: urgency (“10 minutes”) + request for a password — both are warning signs.
- Message 2 (meeting after school): no warning sign — an ordinary message.
- Message 3: secrecy (“don't tell anyone”) + urgency (“before it's gone”).

9. Scams Target Emotions, Not Logic (Strategist)

Template: Spot the Scam | Age band: Strategist | Answer type: Objective + short reasoning

- Message 1 (guaranteed way to multiply money): excitement (with a touch of trust via “friend of a friend”).
- Message 2 (unpaid fine, pay immediately): fear.
- Message 3 (“as someone you trust...”): trust.
- All three share the same mechanism: trigger a strong feeling before the reader can verify the claim — accept reasoning that identifies this.

10. Giving on Purpose (Builder)

Template: Giving on Purpose | Age band: Builder | Answer type: Open-ended (arithmetic check only)

- No single correct split — any three amounts that add up to the total the child was given are valid.
- Only the addition itself (do the three numbers total the stated amount?) is objectively checkable.
- The reflection line is fully open-ended — accept any genuine reasoning.

Adult note: Pick a real, meaningful weekly amount together before your child starts (e.g. their actual allowance or a round practice number) — the template deliberately leaves this blank for you to fill in with them.

11. Money You Can't Hold (Explorer)

Template: Sort It Out | Age band: Explorer | Answer type: Objective

- PHYSICAL: a coin, a paper note, a piggy bank of coins
- DIGITAL: tapping a card, an online payment screen, a phone payment

12. How a Card Payment Actually Works (Builder)

Template: Order the Steps | Age band: Builder | Answer type: Objective

- 1. The card is tapped on the machine
- 2. The system checks there's enough money in the account
- 3. The payment moves from the buyer's account to the seller's account
- 4. A green tick or receipt appears — the payment is confirmed

13. Staying Safe and Aware With Digital Money (Strategist)

Template: Staying Safe With Digital Money | Age band: Strategist | Answer type: Objective

- Total = 14 (2+3+2+2+3+2) — several small amounts that don't individually feel large, matching the lesson's exact point.
- The message ("URGENT: confirm your payment details...") is a phishing attempt — genuine payment services never ask for details this way.

14. Saving vs Growing Your Money (Explorer)

Template: Sort It Out | Age band: Explorer | Answer type: Objective

- SAVING: "Keeping your coins safe in a jar", "Only changes if you add or take out coins", "Nothing happens unless you do something"
- INVESTING: "Might grow, or might shrink", "Can go up or down by itself", "Nothing is promised"

Adult note: Confirmed: none of the statements imply investing automatically or reliably grows money.

15. Owning a Small Piece of a Company (Builder) — CORRECTED VERSION

Template: Compare & Decide | Age band: Builder | Answer type: Guided reasoning (uncertainty-framed)

- Scenario 1 (hit product): likely to rise — a company doing well often becomes more valuable to others, though nothing is guaranteed.
- Scenario 2 (bad reviews): likely to fall — confidence can drop, though not certain.
- Scenario 3 (great year): likely to rise — reflects the company's performance, but never guaranteed.

Adult note: Wording deliberately avoids presenting these as certain predictions ("likely," never "will"). Do not present investing outcomes as guaranteed when discussing this with your child.

16. Locked Until 18: How a Junior ISA Works (Builder)

Template: Compare & Decide | Age band: Builder | Answer type: Objective + open-ended

- Cash Junior ISA: value stays steady / like a normal savings account / not invested.
- Stocks-and-shares Junior ISA: value can go up or down / not like a plain savings account / invested.
- Bottom question is fully open-ended — there's no single right choice.

17. Junior ISAs: Ownership, Timing, and Changing Rules (Strategist)

Template: Order the Steps | Age band: Strategist | Answer type: Objective

- 1. Account opened — a parent/guardian manages it.
- 2. Child turns 16 — the child takes over managing the account themselves.
- 3. Child turns 18 — the child can finally withdraw the money.

Adult note: This worksheet deliberately excludes the annual allowance figure (£9,000 for 2026/27 in the lesson), since allowance rules can change — always check current, official guidance (e.g. GOV.UK) rather than treating any specific figure as permanent.

18. Need It or Want It? (Explorer)

Template: Sort It Out | Age band: Explorer | Answer type: Objective

- NEED: a winter coat, bread for dinner, a safe place to sleep, a school jumper
- WANT: a video game, a toy car, stickers, a chocolate bar

Adult note: If your child argues a 'want' is a need, try asking 'what would happen if you didn't have it at all?' rather than telling them they're wrong.

19. The Grey Area (Builder)

Template: Compare & Decide | Age band: Builder | Answer type: Objective label + reasoning

- 1. Calculator broke, needed today for a project: Need — required for the task at hand.
- 2. Wants a fancier calculator, old one works: Want — the existing one is sufficient.
- 3. Laptop required for online homework: Need — required for essential schoolwork.
- 4. Laptop used only for games: Want — not essential in this use.
- Reasoning matters as much as the label — accept any answer that correctly explains what makes it situational.

20. Needs, Wants, and Social Pressure (Strategist)

Template: Needs/Wants/Social Pressure | Age band: Strategist | Answer type: Objective label + open reasoning

- 1. “Don’t be the only one without it!” — Fear of Missing Out
- 2. “Everyone who’s anyone has this.” — Fitting In
- 3. “Offer ends tonight — don’t wait!” — Urgency
- 4. “Join the crowd — get yours today.” — Fitting In
- The 'real want underneath' line can vary — accept any answer that recognises the product itself may not be needed, and that a feeling (belonging/urgency/FOMO) is what’s actually being sold.
