EXPLORER • 6–8 suggested • Activity 03

A rainy-day choice

In this story, Emma needs to walk outside in the rain. She has no suitable coat.

Which item meets the need in this story?

- ○ A ribbon
- ○ A raincoat
- ○ A ball

Plan a small outing

A fictional outing budget is 12 pounds. Food costs 5 and travel costs 3.

1 1 1 1 1 1 1 1 1 1
1 1

What remains after those two costs?

- ◯ 3 pounds
- ◯ 4 pounds
- ◯ 8 pounds

Check an AI answer

A pretend AI helper confidently says that 10 + 7 = 18.

Which action checks the claim independently?

- ◯ Accept it because it sounds certain
- ◯ Repeat the same question until it agrees
- ◯ Calculate or count the total: 17

Check the reasoning together

03. A rainy-day choice

Answer: A raincoat. The raincoat helps Emma stay dry in this situation. Needs depend on the person and circumstances; a wanted item is not a bad item.

Explore further: Change the weather in the story. Does the same choice still fit?

08. Plan a small outing

Answer: 4 pounds. Five plus three is eight, and twelve minus eight leaves four. The unspent amount remains available.

Explore further: Add an optional 2-pound activity. Record the new remainder.

18. Check an AI answer

Answer: Calculate or count the total: 17. Ten plus seven equals seventeen. Confident wording is not evidence of accuracy. Use an appropriate independent check and never enter private information for this activity.

Explore further: Give one kind of claim that would need a reliable source rather than arithmetic.
